New relations module (version 15).....	3
cmHost application cmRelationManager – V2.....	3
cmOffice – Scientific program	4
fix: Session type (admin table).....	4

Introduction

This Release Note provides the latest information about new features, enhancements and defects fixed in any of the builds of cmOffice version 2.82.

All described changes apply for version 15 of cmOffice. Those changes that also apply to the latest version 2.75 build c for version V13 of cmOffice, do have an indication “also V13” in the title bar.

cmDocument (Version 443)

Because of an update in the Microsoft Office Product suite, Covr needed to adapt the communication process between Microsoft Word and the cmDocument application.

The Microsoft update caused a malfunction in cmDocument in those cases that more than 1 “document” needed to be processed. CmDocument did no longer receive a signal that Word finished the handling of the first document. As a result cmDocument came into a “wait mode” and did not start the processing of the next document.

This issue has been resolved in version 443 which has been incorporated in both latest versions of cmOffice V15 and V13.

cmOffice – RELATION MANAGER

WHAT HAS CHANGED IN THE RELATION MANAGER?

The biggest change is in the internal, technical setup of the relation structure in the Relation Manager (Module) inside cmOffice.

NEW RELATIONS MODULE (VERSION 15)

In the new relations module, the relation content is contained in 1 relation record. This record contains **all** the associated data of a person (also called an account) or an institute.

Links are no longer used. Each relation record is self-contained. All data is bundled in that 1 record.

The main advantages are a less complex handling of the data in the cmOffice internal code and a more comprehensive overview. A disadvantage might be that the user of the system must input more data.

More info on the Relation module & Manager can be found “CMOffice Relation Manager” PDF file located in the <http://www.covr.be/downloads/reference> page.

CMHOST APPLICATION CMRELATIONMANAGER – V2

Because of this major update also the cmHost application needed to be reworked. Covr decided to create a new cmHost application named cmRelationManager. The cmRelationManager is explained in the document “cmRelationManager” PDF located in the <http://www.covr.be/downloads/reference> page.

The cmRelationManager has been extended with four new functions being:

- De-activate an account
- Change name request
- Add a CC-mail address
- Upload Pictures

More detailed information can be found in the document “cmRelationManager V2” PDF located in the <http://www.covr.be/downloads/reference> page.

cmOffice – Scientific program

FIX: SESSION TYPE (ADMIN TABLE)

Under certain conditions, it was not possible to add a session type (the new item could not be saved). This has been resolved.
